

Lighter Page Type Tutorial

In order to add a Lighter page type you need to access your Application's Dashboard and go to "Edit pages" section. Click on Add New Page button, the "+" button below the list of the currently available pages.

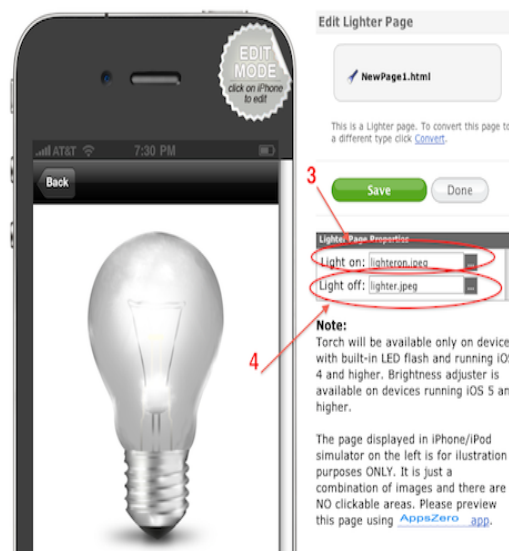

1- Select the Lighter Page Type

2- Press Create

After these steps a new Lighter page will appear in your application dashboard. In this page type you can modify the image of the on/off lighter screen.

[My applications](#) > [Winter1's Dashboard](#) > [Edit Pages](#) > [NewPage1.html](#)

3 - Select an image from the resource manager/ upload a new one

4 - Select an image from the resource manager/ upload a new one

Now you need to create a link to this page type within your application. This can be accomplished by adding a Lighter Button linked to the Lighter Page Type.

5 - Add a new Menu Item in either of the Menu Type pages (in the example was used the Webkit Menu Page Type)

6 - Link the new created Menu item to the proper Lighter page that you have added in your application

Note:

Torch will be available only on devices with built-in LED flash and running iOS 4 and higher. Brightness adjuster is available on devices running iOS 5 and higher.

Here is the Result :
