

PN Topics Page Type Tutorial

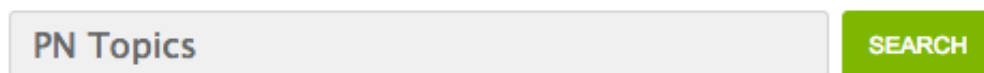

If you have enabled push notifications service in your application you might also want to set up your push notifications topics. Exactly for this purpose we have created a special page type for you called PN Topics.

To add a PN Topics page to your app go to its *Dashboard* → *Edit Pages* → *+ Add New Page*.

A menu with all our page types will appear:

Use the search engine to find the PN Topics page type.

Add the page to the application and start to editing it.

PN Topics page type allows you to create and group the topics for the push notifications you are going to send to the users of your app. A user can then choose which topics he or she would like to follow.

To fully edit PN Topics page type you will have to set a title for your page, enable/disable search line that user may use to easily find the topic they are interested, add Notes to your page that may serve as a caption for that page to introduce the user into its functionality and edit Topics.

Topic Properties

Title:

Group:

Note:

Select a PN Topics you would file to follow.

When you add Topics you will have to fill Topic Properties, you need to enter a title for your topic and sort by a group at your need.

After all customizations are done, your PN Topics page will look something like this:
