

SMS Page Type Tutorial

AppsZero's applications are able to send SMS messages from inside the app. Unfortunately, SMS page type works only on smartphones - the devices that have native support for short message service. iOS platform support starts with version 4.0.

To add an SMS page to your application go to its Dashboard → Edit Pages → + Add New Page. This will take you to AppsZero's Marketplace where you may find features to your app.

Select the SMS page type and click "Use this Page Type".

The editor of SMS page type essentially has two specific options: Number, and Message input fields.

Edit SMS Page

✉ sms1.html

This is a SMS page. To convert this page to a different type click [Convert](#).

SAVE **DONE**

Number:

Message:

The values of Number and Message input fields will automatically travel to the SMS screen which I'm sure you are familiar with. User, of course, will be able to edit these values.
